

ICT-2009.7.3 ICT for Governance and Policy Modelling
FP7-ICT-2009-4 Support Action (SA) Project

Roadmapping on ICT for Governance and Policy Modelling

Validation and dissemination workshop, organised as the pre-event to the

**8th Eastern European
e|Government Days 2010**

April 21, 2010, 13.00 – 17.00

Venue: Judicial Academy, Hybernska 18, Prague 1, Czech Republic

Contact person: Irina Zalisova, zalisova/ad/epma.cz

Agenda

12:00 – 13:00 Arrival – Lunch buffet – Get Together

13:00 – 13:30 General info on the CROSSROAD project approach, objectives and activities, **Irina Zálišová, EPMA (CZ)**

13:30 – 14:15 Roadmapping process and State-of-the-art in ICT for Governance and Policy Modelling: results achieved so fare in CROSSROAD, **Maria Wimmer, UKL(DE)**

14:15 – 14:45 Open questions for a wide community, **Irina Zálišová**

14:45 – 15:15 Coffey break

15:15 – 15:45 Experiences of WAVE project (visual argumentation) and EMPOWER project (ePetition), **Daniel van Lerberghe, Politech Institute (BE)**

15:45 – 16:45 Scenarios of how governance and policy modelling could develop in the future, **Maria Wimmer**

16: 45 –17:00 How to participate the consultation process of the CROSSROAD project?
Irina Zálišová

National Technical University
of Athens (Coordinator)

Management Agency

University Koblenz-Landau

Institute for
Propagative
Technological Studies
Joint Research Centre
European Commission

Supporting information

The **CROSSROAD** FP7 Support Action project, www.crossroad-eu.net, has started in January 2010 with the goal to bring together research communities from different domains and industries and to orient them towards common goals by building a research roadmap on ICT for governance and policy modeling. Lasting the whole of 2010, CROSSROAD will create a shared vision to support policy and research in this field.

The idea for CROSSROAD stems from the need for governments to regulate an increasingly interdependent and unpredictable world. As the current financial crisis has shown, future scenarios are likely to provide greater complexity, while citizens are becoming more vocal in monitoring and influencing policy decision. In order to support governments in designing policies, promising ICT tools are becoming available on the market. However, such tools are not widely adopted, and research is fragmented between academic fields, application areas and approaches to innovation.

The Prague workshop is focused on dissemination and consultation with stakeholders on the roadmapping process and building of the Validation Community. Specific objectives of the workshop:

- to raise awareness and create consensus among the eGovernance and ICT communities of research and practice on future research priorities in the field of participation, governance and policy modelling;

- to involve a wide range of interested experts into Validation Community in order to support the consultation process of the roadmapping. Each participant may become involved into the roadmap development (viz www.crossroad-eu.net) and join the Validation Community by discussing the state of the art of the research fields, related to ICT for governance and policy modelling.
